SURETRAC
PERFORMANCE TIRES

TREADLUX RT

Combines the aggressive styling of a mud-terrain with the refined features of an all-terrain. Its rugged tread pattern delivers strong off-road traction while maintaining stability and comfort on highways.

The wide, staggered tread blocks enhance grip on loose surfaces, while deep grooves and stone-ejecting features ensure excellent self-cleaning performance.

The shadow design of the tread and the mecha shape of the sidewall give the tire a fashionable element. On the sidewalls, stronger shoulder lugs not only improve traction in deep mud and snow but also add extra protection against cuts and abrasions, giving the tire a striking, tough appearance."

TREADLUX XT

- The robust center tread blocks are staggered and interconnected by reinforcing ribs, ensuring a more comfortable ride on paved roads.
- The open shoulder tread design provides superior handling on unpaved surfaces.

- Large shoulder blocks increase tread rigidity, improving grip and handling.
- This ensures tread rigidity and a larger contact patch, enhancing driving and handling performance on paved roads while also providing resistance to sand and stone cutting on unpaved surfaces.

The irregular tread block edges and the step design of the main tread block edges evenly distribute the pressure where the tire contacts the ground, effectively increasing the contact area, improving the tire's grip performance, and enhancing climbing ability.

- Robust sidewall tread blocks create a three-dimensional appearance, protecting the tire body and enhancing impact and puncture resistance.
- The three-dimensional sidewall protection effectively protects against external damage from harsh road conditions while also improving traction in mud and sand.

The mud-elastic strips at the bottom of the ditch have a self-cleaning function and provide better grip performance under adverse road conditions.

GEEFORCE

ALL SEASON PERFORMANCE

The tread design of GEEFORCE tire features multiple circumferential grooves for efficient water evacuation, reducing hydroplaning risk. The irregularly arranged lateral slots and sipes enhance grip on various road surfaces, improving traction and braking performance. The overall pattern balances wet and dry handling, with optimized block shapes for durability and quiet operation. All-season performance for customers demand.

SURETRAC TIRE ENGINEERED FOR CONFIDENCE

SURETRAC Tires is dedicated to delivering reliable mobility for everyday drivers and families, creating products that prioritize safety, all-season dependability, and lasting value. Our tires are engineered to provide a secure grip, consistent handling, and a smooth, quiet ride for the long haul. In essence, we build tires that deliver the real-world confidence and security modern drivers require, not just what the industry assumes is sufficient. So, whether you're navigating city streets during your daily commute or cruising on the highway for a family trip, SURETRAC provides the dependable performance that gets you to your destination with peace of mind.

SURETRAC Tires are manufactured in state-of-the-art facilities renowned for their precision and rigorous quality control. Drawing on a legacy of tire-making expertise, our engineers are committed to the continuous development of trustworthy and durable tires, establishing SURETRAC as a name synonymous with safety and reliability on the road.
